

PINK MATTERS® X HU-FRIEDY SURGICAL KIT

MINIMALLY INVASIVE PERIODONTAL AND IMPLANT SURGERY SOLUTION

Minimally invasive periodontal and implant surgery has become the new standard to improve healing processes and patient quality of life. With the development of many innovative surgical procedures the need for specifically designed instruments has become crucial. Pink Matters, a group of dedicated clinicians, partnered with Hu-Friedy, the world leader of high quality surgical instruments, to develop a universal surgical kit, including five new instruments. It allows clinicians to perform all modern periodontal and implant surgery procedures.

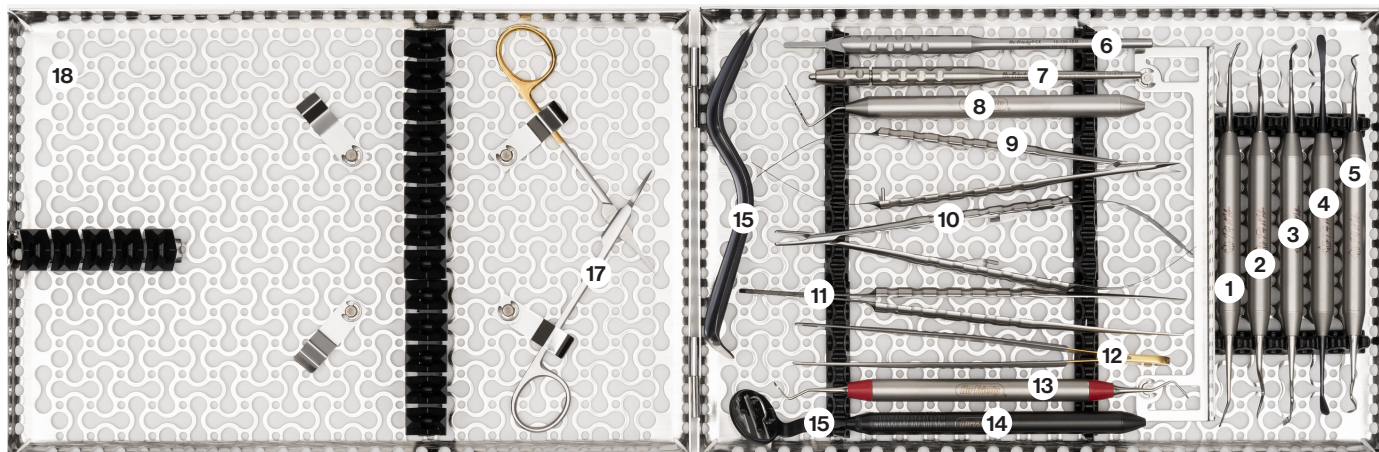

Pink Matters Group

VERSATILITY AND EFFICIENCY: PINK MATTERS KEYS FOR SUCCESS

The "Pink Matters X Hu-Friedy" surgical kit is the result of the partnership between Pink Matters group and Hu-Friedy, and it includes highly versatile precision instruments designed for every minimally invasive periodontal and implant surgery. An optimal number of proven Hu-Friedy instruments, associated with five unique new instruments, allow efficient and straightforward procedures.

The five new multipurpose instruments include two periodontal knives which might also be used as micro-elevators, a ground-breaking chisel, an innovative periodontal curette – all designed with the EverEdge™ 2.0 Instrument technology – as well as a smart two-side periosteal in Black Line technology.

COMPLETE SURGICAL KIT

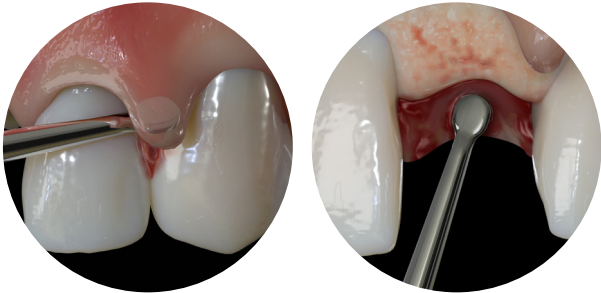

THE UNIQUE PINK MATTERS® INSTRUMENTS

1

PMNANOSS PM Nanos S (Straight), EverEdge™ 2.0 Perio Knife, Short

Used for suprapariosteal dissection apically and laterally during tunneling and soft tissue surgical procedures, this instrument can also be used to elevate thin papilla during partial or full thickness flap surgery and is also convenient for papillary preservation technique.

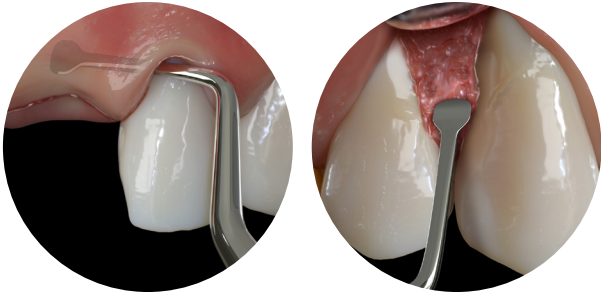

2

PMNANOAS PM Nanos A (Angulated), EverEdge™ 2.0 Perio Knife, Short

Used for suprapariosteal dissection apically and laterally during tunneling and soft tissue surgical procedures, this instrument can also help in the creation of a partial or full thickness envelope flap during connective tissue grafting procedures in perio-plastic surgery and implant surgery. Nano A is also very useful when elevating a full thickness flap in the lingual and palatal area during flap surgery.

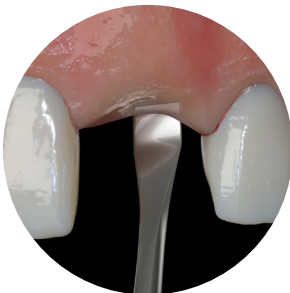

3

PMEDGES PM Edge, EverEdge™ 2.0 Crestal Bone Chisel, Short

Designed to elevate full thickness flap in the posterior area in preparation for implant placement. The Edge can be also very useful early on in the implant placement procedure when reflecting the thicker buccal soft tissue. This instrument also allows for bone recontouring during crown lengthening and is very efficient at bone harvesting in areas with delicate anatomy, such as the nasal spine.

4

PMSPLITSX PM Split, Black Line Periosteal, Short

Two sides thoughtfully developed: one side sharp to elevate safely full thickness flap in perio and implant surgery. The other side blunt to reduce the surgical risk when performing elastic fibers separation during buccal and lingual flap advancement.

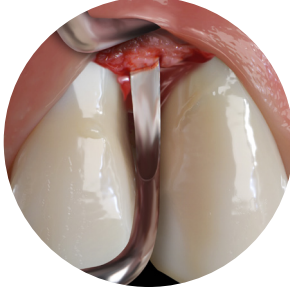

5

PMPRODIGYS PM Prodigy, EverEdge™ 2.0 Surgical Curette, Short

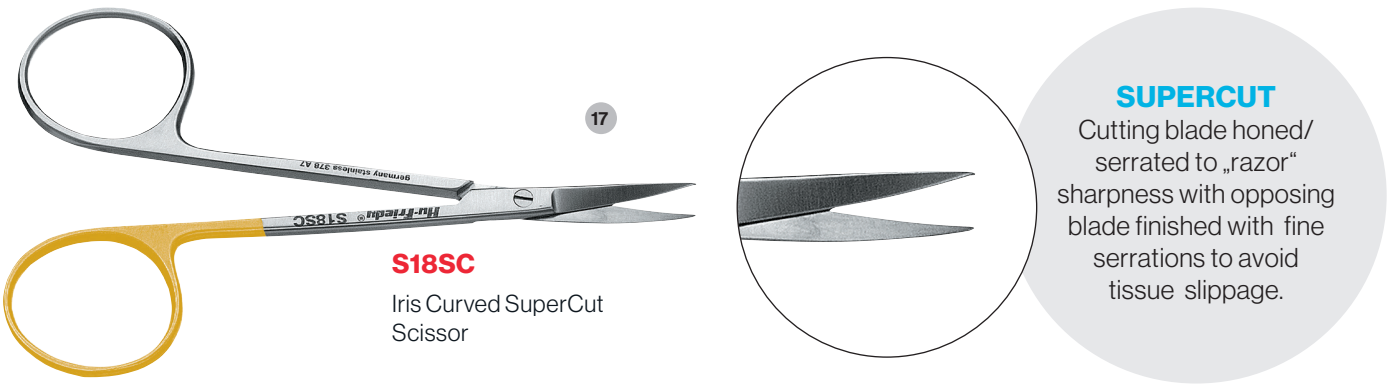

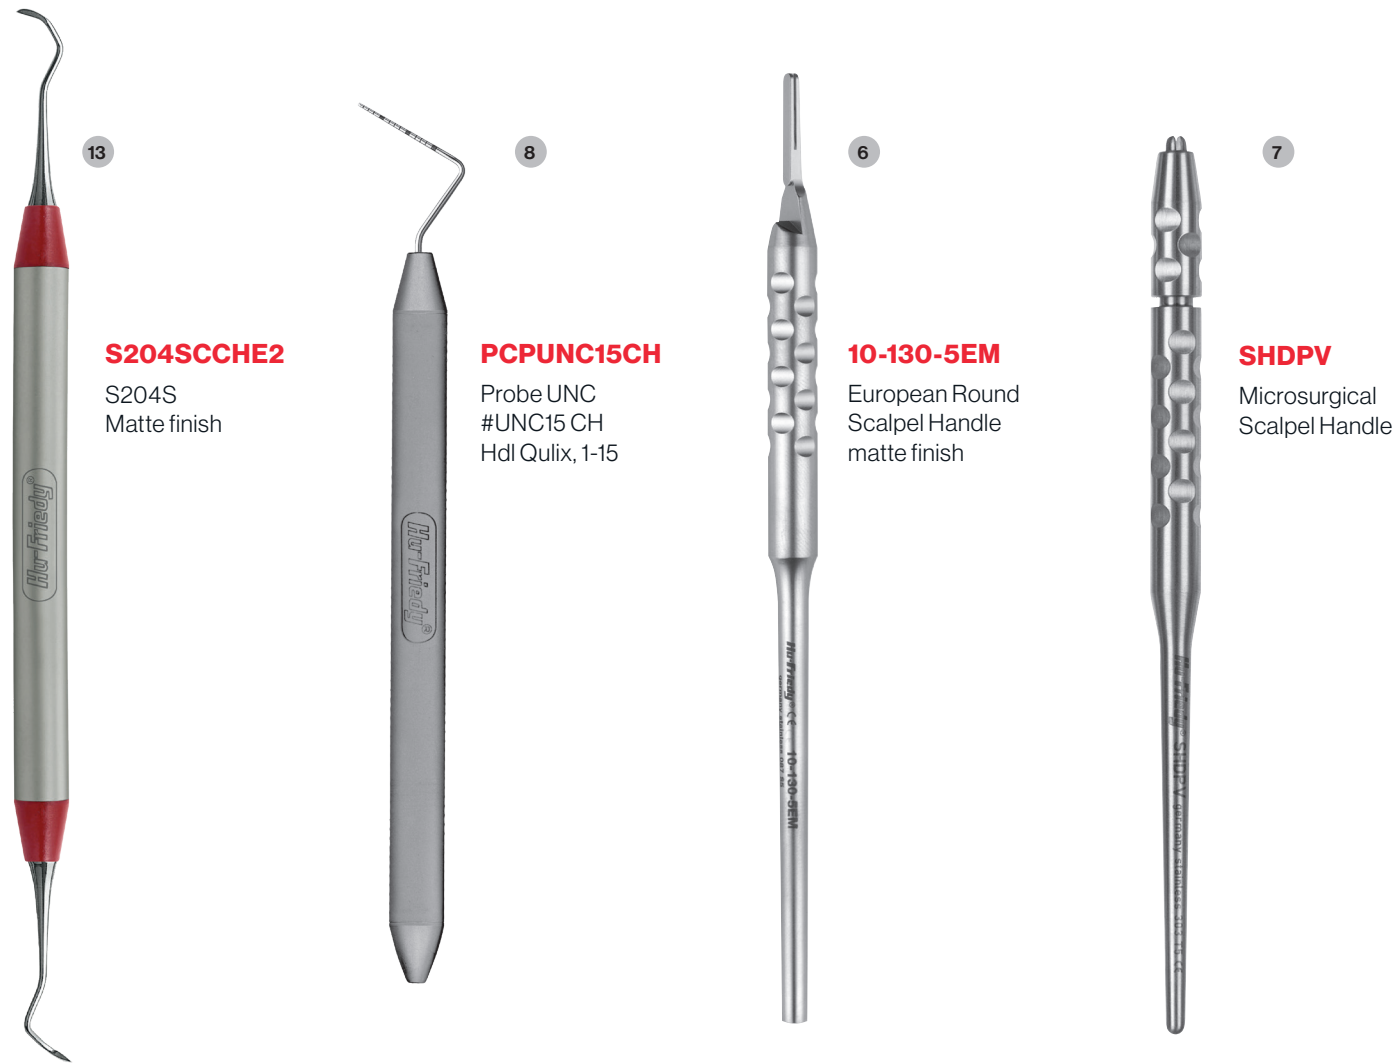

This curette was developed to improve granulation tissue removal during flap surgery. The angulation of the curette improves the access to narrow periodontal and peri-implant defects, particularly in the posterior area.

Black Line

REDUCE GLARE UP TO 80%*
See your patients – not your instruments. Glare interferes with visibility. Reducing this disruption to your visibility allows you to see more detail and offer more accurate patient care. HD Black Line Mirrors are engineered to optimize clinical outcomes by delivering superior visibility throughout any dental procedure.

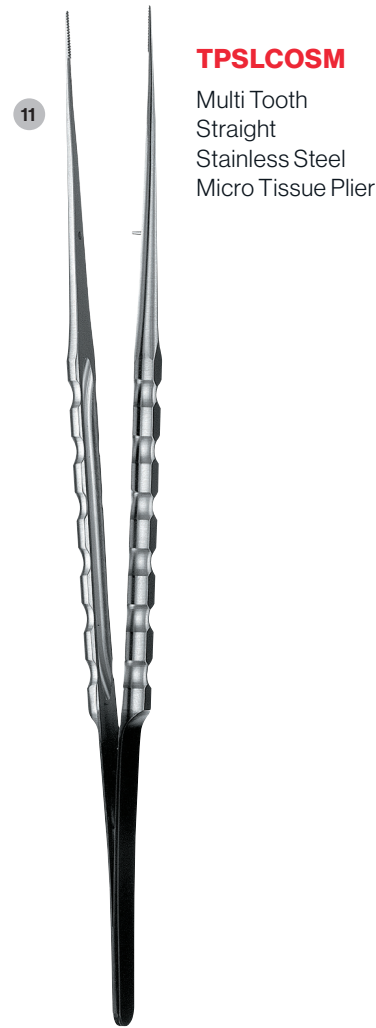

* When comparing the Hu-Friedy DLC coated mirror head and handle to the Hu-Friedy non-coated stainless-steel mirror head and handle.

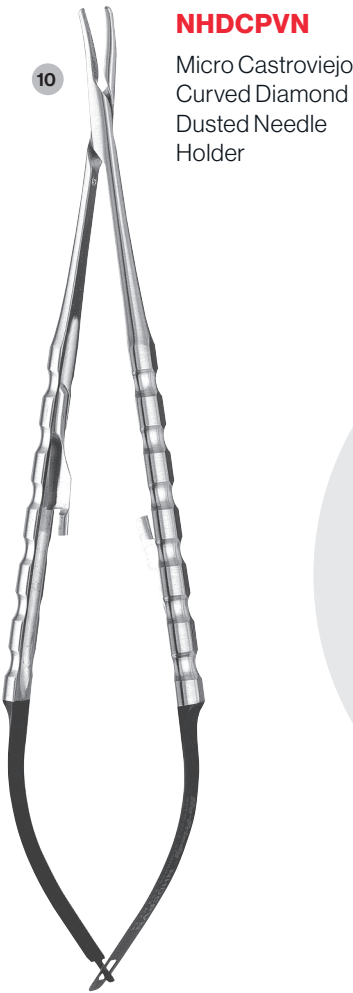

CRMx
Minnesota Retractor
Black Line

BLACK LINE
The Black Line is designed to optimise clinical outcomes by delivering efficiency throughout the entire perio and surgical procedure. The Black Line features a performance engineered coating for optimal edge retention, reduced light reflection afforded by the black matte finish and enhanced contrast and visual acuity at the surgical site and underlying tissue.

DID YOU KNOW?

All hinged instruments – forceps, rongeurs, scissors, pliers, hemostats, orthodontic pliers, etc. – should be kept lubricated. Regular use of proper lubricants, like Instrument Lubricant Spray (**ILS**), will prevent rust, corrosion and stiff joints to ensure smooth operation. **All hinged instruments should be sterilised in the open position.**

CHOOSE THE COLOR.

Just add the color coding number to the last part of the partcode (replace " _ " with the number)

WHY YOU SHOULD USE AN INSTRUMENT MANAGEMENT SYSTEM (IMS):

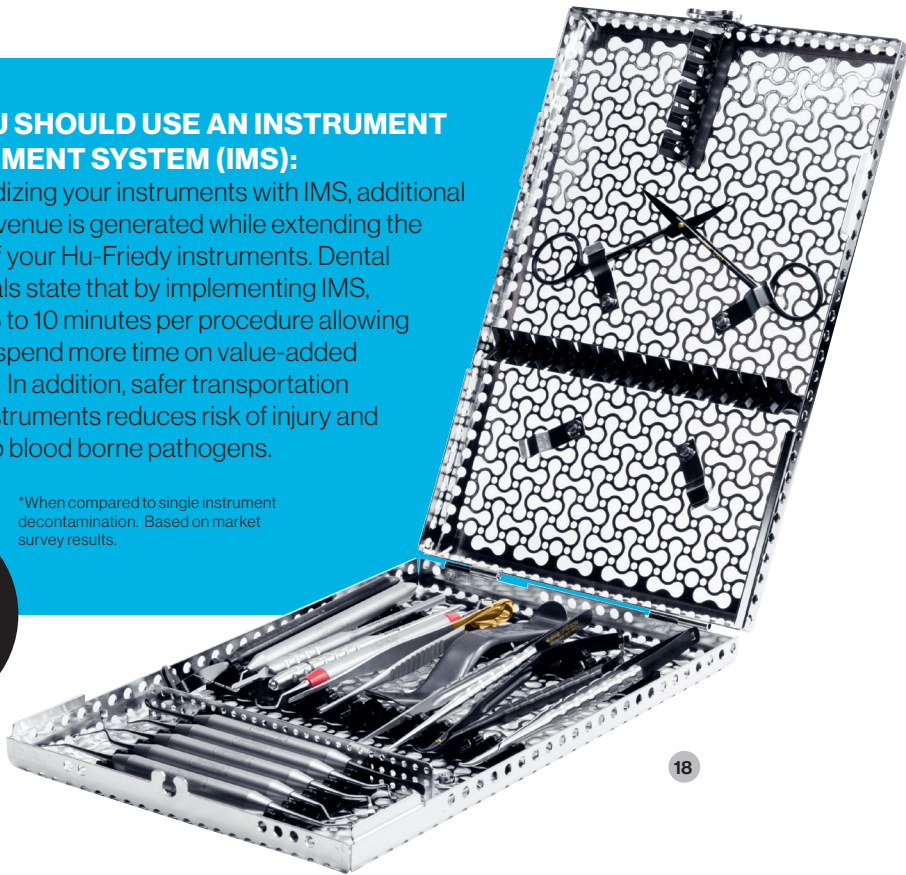

By standardizing your instruments with IMS, additional time and revenue is generated while extending the useful life of your Hu-Friedy instruments. Dental professionals state that by implementing IMS, they save 5 to 10 minutes per procedure allowing the staff to spend more time on value-added activities*. In addition, safer transportation of soiled instruments reduces risk of injury and exposure to blood borne pathogens.

*When compared to single instrument decontamination. Based on market survey results.
